Helping people get back to normal life

## Features

- Non wetting dry mist technology
- Completely non-touch automated system
- Thermographic camera and facial recognition
- Temperature check, display, and alarm
- Human voice instructions
- Employee and visitor schedule management
- Custom branded with your brand
- Uses 50% less disinfectant than comparable systems

## EU-Split Over Door Disinfection System

The EU-Split is an easy installed solution that can be mounted above doors and entrance ways in many buildings and applications to efficiently sanitise people passing through.

The EU-Split has a motion sensor that activates three dry mist sprays for a set period of time, sanitising the person passing through without wetting.

# Disinfection System

## Features

- Fine Droplet size (less than 30 microns)
- Uses 50% less solution than comparable systems
- Doesn't wet clothes or the floor
- Easy to refill
- Photocell for automated on/off
- Completely non-touch automated system
- Efficient disinfection thanks to dry mist atomising nozzles

# ECO-Fog Model 2

## Features

- 1-5 micron droplet size
- Quick & Easy set up
- Dry Fog Technology
- Non-drip & self-cleaning
- Virtually Maintenance free
- Easy to transport
- Fogging heads mounted on adjustable height tripods
- All terrain puncture proof tyres
- 19 litre tank
- Continuous or timer spray control

## Features

- 1-5 micron droplet size
- Adjustable vertical lance (up to 2 mtr high)
- Dry Fog Technology
- Non-drip & self-cleaning
- Virtually Maintenance free
- Fully Adjustable countdown & on/off timer
- On-board compressor
- Lockable wheels
- Fully Stainless Steel Construction
- On-board compressor

## Eva-Mist Spray Gun

IC Spray is pleased to introduce our new Eva-Mist spray gun, designed to quickly and effectively apply disinfectant without wetting surfaces making the Eva-Mist an important product in protecting against Covid 19.

The spray gun is lightweight at only 390g and with a simple trigger to operate, the Eva-Mist is compatible with all disinfectants and supplied with either a 250 ml quick connect liquid canister or 500 ml screwed liquid canister.

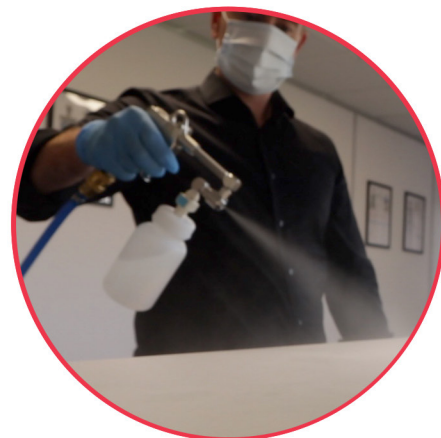

The spraying of disinfectant by mist is proved in terms of swab testing and has an added benefit of using less disinfectant compared to other sprayers.

To operate the Eva-Mist simply connect an air hose to the spray gun, fill the liquid canister and spray, it is as easy as that.

# Eva-Mist Spray Gun

The Eva-Mist gun is a quick and easy solution for sanitising and disinfecting surfaces, eliminating the need for drying the surfaces with cloths. Using the Eva-Mist is also more environmental friendly as it reduces the need for using and disposing of antibacterial wipes and cloths.

The Eva-Mist spray gun produces a dry mist spray which does not wet and is suitable for use on all surfaces including electronics and fabrics.

## Features

- Lightweight product
- Consistent operation
- Compatible with disinfectants
- Built for all applications
- Quick & easy to operate
- Does not wet surfaces
- Suitable for all surfaces including electronics & fabrics
- Simple trigger operation

## Fixed Room Disinfection Misting Systems

IC Spray consults with customers to design and supply a fixed and permanent system for misting larger areas including larger public transport buildings and large public and private sector work spaces. Our fixed disinfection misting systems offer a full and comprehensive disinfection of the area by creating an ultra-fine disinfectant fog that works its way onto all surfaces, whether desks and computer keyboards in offices, to seating, machinery and all other equipment.

As the droplets created are so fine, airborne microorganisms are also reduced. Importantly, no equipment or surfaces are made wet, again this is down to the ultra-fine droplets created by our spray technology.

The fixed systems are designed with each individual application in mind, meaning controls can be specific to customer's requirements, for example, timed spray operation when buildings are closed.

The fixed room disinfection systems are designed to have little or no maintenance or operator input, allowing for ease of use, but giving maximum performance. Having such a system installed gives everyone maximum protection from viruses in their daily lives.

### Advantages of Fixed Whole Room Fogging:

- ✓ Less than 5-micron droplets
- ✓ Low energy & running cost
- ✓ Easy & flexible control, can be linked into building controls
- ✓ Hygienic design and easy operation
- ✓ Fully automated
- ✓ Disinfection of all surfaces & airborne microorganisms quickly and safely
- ✓ More cost effective than sub-contracting
- ✓ Removes the need for costly & inconvenient deep cleaning
- ✓ Low maintenance
- ✓ Low disinfection chemical usage
