

DFN Misting nozzles

Unique design to assist in overcoming clogging issues associated with very low flow misting nozzles.

The double filtration uses double filtration giving a fine atomisation whilst ensuring a pure spray. They are rated at 30-40 micron filtration levels.

The hollow cone misting gives excellent coverage forming a virtual full cone coverage.

Features

Outer & Inner Filtration

Ribbed bronze sintered filter

Double filtration

High precision engineering

Benefits

35% more surface filtration

Rated at 30-40 microns each

Fine atomisation Good misting qualities

Quality long lasting products

Materials

Nozzle parts are 416st.st

Filters sintered bronze

Spray angles

30°, 45°, 60°, 80° and 90°
